Lab Connection Information

- Labs may take up to five minutes to build
- Access to the Horizon Dashboard is provided on the Live! Lab page, along with your login credentials
- SSH information is provided on the Live! Lab page
- Labs will automatically end once the allotted amount of time finishes

This course provides a number of hands-on labs, known as Live! Labs, from which to practice OpenStack. This initial lab is intended to familiarize you with accessing and using this environment, since it differs slightly from other Live! Lab sets up at Linux Academy. This same setup is used in other OpenStack courses.

Environment

Once the Live! Lab is started, you are presented with information regarding the URL for the Horizon Dashboard, login information for both the cloud admin and demo tenants, and SSH information that includes a randomly-generated password.

The Horizon Web GUI

The link on the Live! Lab page takes you to the login screen of the Horizon Dashboard. To log in as the *admin* user, use the provided credentials. From here, you have access to the whole dashboard and can make both high- and low-level changes within the restrictions of the lab.

OpenStack Via SSH

OpenStack can also be accessed via SSH, as *root*. SSH into the server using the provided IP address as you would any other server. The root password is randomly-generated and available on the Live! Lab page.
